How to set project directory path

In future lectures we will be using this command:

"export PYTHONPATH=$PYTHONPATH:."

This command is only needed for Mac system.

If you are working on Windows, please follow this:
Navigate to the project directory. Not to the package where the code is, just to go project directory on terminal using **cd** command.
Then you can use this command:

set PYTHONPATH=%PYTHONPATH%;C:\Complete path of the project directory

If the above does not work, please try these also:

set PYTHONPATH=%PYTHONPATH%;%CD% (%CD% represents current directory)

Alternatively, you can do this:

You can add the directory where your project is located to the Windows PATH environment variable.
